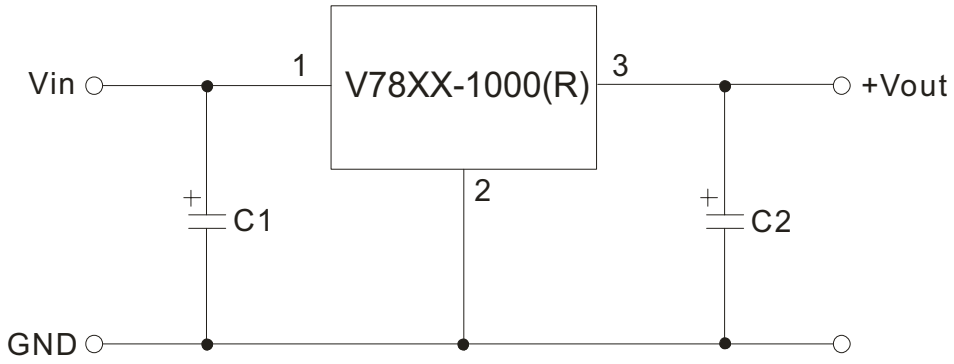
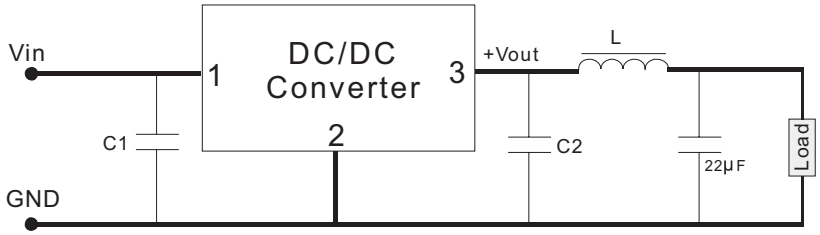
TYPICAL APPLICATION CIRCUIT



Notes:
1. C1 and C2 are required and should be fitted close to the converter pins.
2. If the input voltage is greater than 26 Vdc (3.3 Vdc output model) or greater than 28 Vdc (all other models), it is required to have C1 be ≥ 22 µF electrolytic capacitor to protect the part from voltage spikes.

OUTPUT RIPPLE REDUCTION



To reduce output ripple, it is recommended to add a LC filter in output port.

L: Recommended parameter 10µH ~ 47µH.
